Appendix 1

Coordinates and Information on the Outer Limit of the Continental Shelf beyond 200 nautical miles off Bouvetøya.

1. Introduction

Norway signed the United Nations Convention on the Law of the Sea (hereinafter the Convention) on the day it was opened for signature and ratified it on 24 June 1996. It entered into force for Norway on 24 July 1996.

Norway has transmitted two submissions to the Commission on the Limits of the Continental Shelf (hereinafter the Commission) in accordance with article 76 paragraph 8 of the Convention. On 27 November 2006 Norway transmitted a submission in respect of areas in the Arctic Ocean, the Barents Sea and the Norwegian Sea. Norway received a recommendation from the Commission in regard to this submission in 2009.

On 4 May 2009 Norway transmitted a submission in respect of Bouvetøya and Dronning Maud Land. Norway requested the Commission not to take any action for the time being with regard to the information in the submission that related to the continental shelf appurtenant to Antarctica.

In a letter of 30 August 2013 the Commission informed Norway that it had established a Subcommission for the consideration of the 2009 submission. In connection with meetings with the Subcommission, Norway has presented new and additional data and analyses, including on the classification of the Shaka Ridge, regarding the outer limit of the continental shelf off Bouvetøya. The revised Executive Summary relates only to the continental shelf off Bouvetøya.¹

In order to take account of the new data and analyses relating to the classification of the Shaka Ridge the Subcommission in its letter dated 7 November 2014 (2014_11_07_SC_LET_NOR1_013) advised Norway to publicise a revised Executive Summary of the submission.

The revised Executive Summary provides evidence to substantiate that the Shaka Ridge forms part of the same hot spot trail as Bouvetøya. The Shaka Ridge constitutes a submarine elevation in accordance with article 76 paragraph 6 of the Convention. Thus, continental shelf beyond 350 nautical miles is included in the revised Executive Summary.

Preparation of the original submission was initiated after Norway's ratification of the Convention in 1996. Acquisition of seismic and bathymetric data, as well as processing, analysis and interpretation of data, have continued until now and the revised Executive Summary is based upon both data acquired prior to the submission of 2009 and new data, analyses and interpretations. Furthermore, Norway has taken past recommendations of the Commission regarding ridge-like features into consideration.

The preparation of the revised Executive Summary has been undertaken by the Norwegian Petroleum Directorate under the direction of the Royal Ministry of Foreign Affairs.

Norway was not assisted by any present members of the Commission in the preparation of the revised Executive Summary.

¹ No revisions have been made in respect of the continental shelf off Dronning Maud Land.

2. Maps and coordinates

Bouvetøya is located in the middle of the southern part of the South Atlantic Ocean. The island, at approximately 54° South Latitude, and the appurtenant maritime areas, are situated beyond the area south of 60° South Latitude constituting the Antarctic Treaty area.

Two maps are included in this revised Executive Summary. Fig. 1 is a three-dimensional overview map showing the continental margins and other characteristic morphological elements in the maritime area concerned. The revised outer limit of the continental shelf off Bouvetøya in the South Atlantic Ocean is indicated in Fig. 2.

The Appendix provides a list of coordinates of the fixed points on the outer limit of the

continental shelf beyond 200 nautical miles off Bouvetøya, the distance between adjacent points and the provision of article 76 on which each point is based.

3. Provisions of article 76 invoked in support of the submission

Norway invokes the provisions of paragraphs 1, 3, 4, 5 and 6 of article 76 of the Convention in support of the establishment of the outer limits of the continental shelf beyond 200 nautical miles.

Only the "Hedberg formulae line" has been used in the submission.

The outer limit of the continental shelf have been delineated by fixed points connected

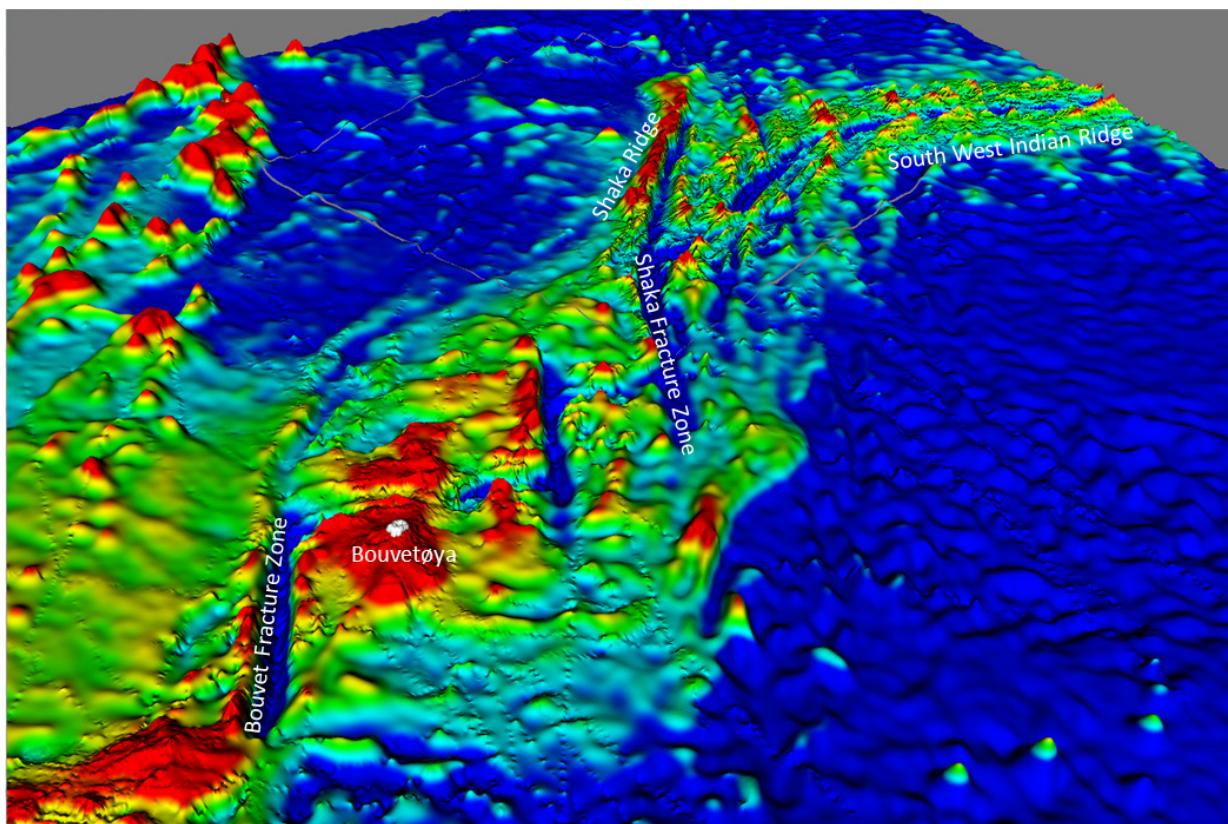

Fig. 1. Three-dimensional map of the seafloor area adjacent to Bouvetøya. The view is from the southwest towards the north-east.

by straight lines not exceeding 60 nautical miles as provided in article 76 paragraph 7.

Data and analyses acquired since the submission of 2009 provides evidence that the Shaka Ridge is a submarine elevation that is a natural component of the continental margin of Bouvetøya in regard to article 76 paragraph 6 of the Convention. Both the 350 nautical miles constraint line and the 100 nautical miles from the 2500 metre isobath constraint, i.e. the depth constraint line, have been used.

4. General description of the continental margin off Bouvetøya

Bouvetøya is itself located on the Antarctic lithospheric plate on the westernmost part of the Southwest Indian Ridge. With a 780 metres peak (Olavtoppen), the landmass of the island is part of a wide, submerged pedestal formed by magmatic rocks. These are formed by hotspot activity associated with the mantle plume that underlies the complex Bouvet Triple Junction.

By seafloor mapping, it can be demonstrated that this submerged landmass of the island includes the Shaka Ridge, along the Shaka Fracture Zone in the east (Fig. 1).

5. Area by area overview

The outer limit beyond 200 nautical miles of the continental shelf adjacent to Bouvetøya is determined on the basis of the foot of the slope established along the flanks of the magmatic pedestal of the island and the Shaka Ridge.

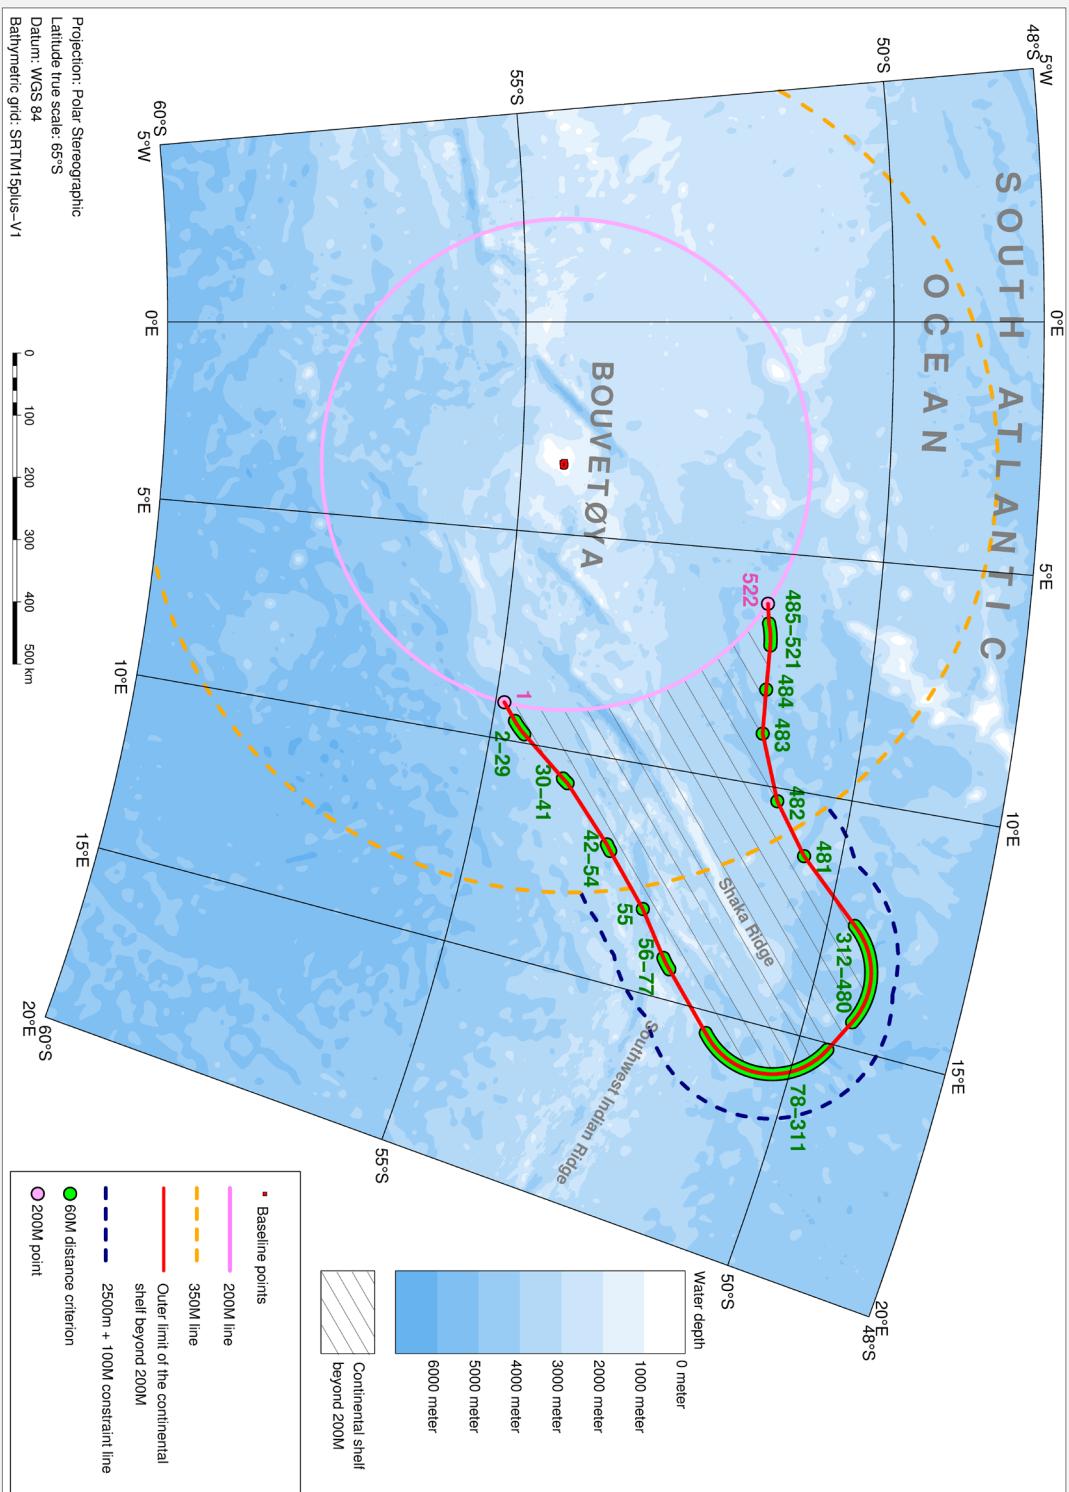

The 200 nautical miles limit line and the 350 nautical miles constraint line are measured from the baseline of Bouvetøya as established by Royal Decree of 25 February 2005, and deposited with the Secretary-General on 31 March the same year.

The outer limit of the continental shelf beyond 200 nautical miles in this area is defined by 522 fixed points established in accordance with article 76 of the Convention. These are as follows:

- 520 points defined by arcs 60 nautical miles from the foot of the continental slope in accordance with article 76 paragraph 4(a)(ii).
- 2 points at the intersections of the outer edge of the continental margin and the 200 nautical miles limit line of Bouvetøya.

The 522 fixed points are connected by straight lines not exceeding 60 nautical miles in length as provided in article 76 paragraph 7. Fig. 2 shows the fixed points and connecting lines.

A colour code indicates the article 76 criterion used to establish them (see also Appendix 1).

The outer limit of the continental shelf beyond 200M off Bouvetøya
