

Scientific Evidence of Significant Adverse Impacts on Seamounts and Other Vulnerable Marine Ecosystems

Monday, 13 July, 13:30 – 14:30 EDT (lunch provided beforehand)

UN Headquarters, Room CR3

Hosted by: Deep Sea Conservation Coalition

Join scientists and experts for a timely discussion on the latest evidence of significant adverse impacts from bottom fishing on seamounts and other vulnerable marine ecosystems.

The event will explore what current science tells us about impacts on these unique ecosystems and how evidence can inform the implementation of international commitments to protect them.
